GIS.REPP@geology.cz

Geodatabase - Part of Central data storage (CDS)

What does the geodatabase contain?

- Geographic data
- Feature Classes (Point x Line x Polygon objects)
- Tables
- Relationships
- Raster datasets
- Topology

Advantages

- Edits and updates of data in one place
- No duplications of data

Technology

- Esri SW (central geodatabase ArcSDE, file geodatabase, ArcGIS for Desktop – floating licenses)

Spatial reference: single coordinate system

Project instruction (to easily include archive data):

Gauss-Krüger A (S-42, zone 12E-18E)

3rd Meridional zone

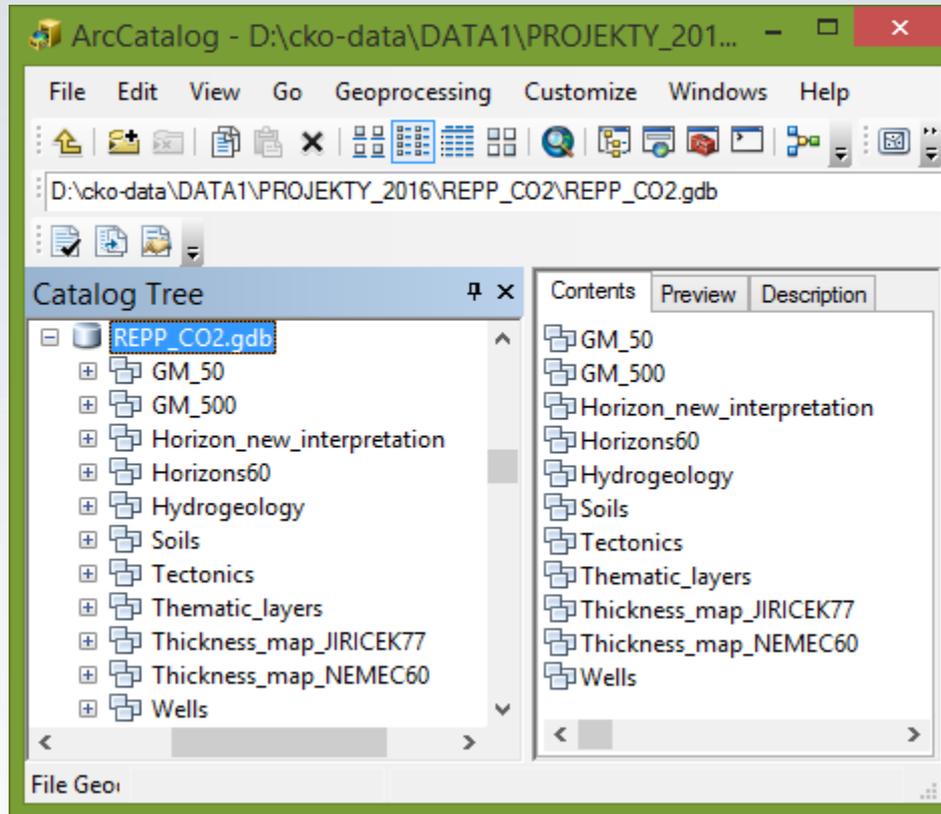

in Esri SW:

Projected Coordinate System > Gauss Kruger

> Pulkovo 1942 > **Pulkovo 1942 GK Zone 3.prj**

EPSG code (WKID): 28403

Related Tables (Petrology, Pressure, Saturation, Seismic profiles description)

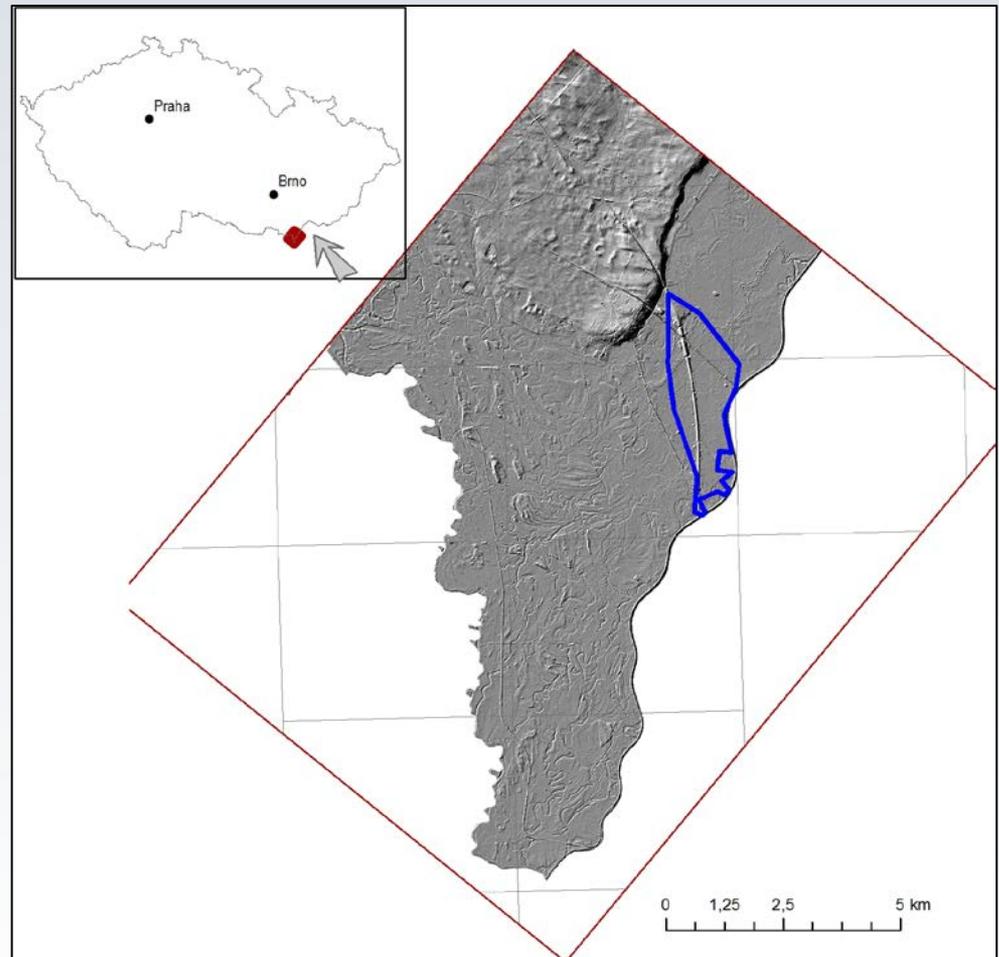

Geodatabase REPP CO₂

Archive data:

- Surface topography
- Wells (xyz)
- Property tables (with Ids)
- Stratigraphy
- Mining data (mining lease)
- Protected areas
- Digital elevation model
- Orthophoto

New data:

- Subsurface topography
- Cross sections
- Geology (boundaries, faults...)
- new interpretations

File system - Part of the Central data storage

- non-geographic data
 - graphics
 - tables
- original data
- data backup

Conclusions

- Use of IT is a key factor for the project success
 - Communication support (website, file system, email directory, ...)
 - Data sharing between project partners
 - Central management of digital spatial data – project geodatabase (single coordinate system, use of codelists, ...) containing archive data and new data, interpretations and results
 - Structured file system for non-spatial data
 - Processing of outputs from the project information system (map or data outputs)
